Description	Bacteriophage T7 RNA Polymerase is a DN high specificity for the T7 promoter. This enzy RNA from DNA downstream from its promote	me catalyzes th		
Source	Escherichia coli			
Purity	>98% as determined by SDS-PAGE analysis.			
Unit Definition	One unit is defined as the amount of the enzyme incorporates 1 nmol of ATP ir acid-insoluble product in 1 hour at 37°C.			
Reaction Condition	1X RNA Polymerase Reaction Buffer, supplemented with 5 mM each ATP, UT GTP, CTP, and DNA template containing the T7 RNA Polymerase promote Incubate at 37°C.			
	 Standard RNA synthesis procedures: 1. Below reaction mixture should be prepared under room temperature and combined in the following order:

	 Incubate at 37°C for 30 minutes to 2 hours. Above reaction mixture may be scaled up or down proportionately. 	
Storage Buffer	T7 RNA Polymerase is supplied in 100 mM Tris-HCI (pH 7.9), 20 mM KCI, 1 mM DTT, 1 mM EDTA, 0.1% Triton® X-100 and 50% (v/v) glycerol.	
Storage	Store at -20°C for up to 6 months, and it is recommended to store at -80°C for long-term preservation. Avoid repeated freeze/thaw cycles.	
Handling Instruction	For optimal storage, aliquot the enzyme, reaction buffer and DTT reagent into smaller quantities and store at recommended temperature. Avoid extended exposure to ice; instead, promptly retrieve the required portion and return it to the appropriate storage temperature.	
Notes	 Transcription reaction should be performed under RNase free condition. Use nuclease-free tubes, reagents, and water to avoid RNase contamination. Also, gloves when working with RNA. The volume of T7 RNA Polymerase can be titrated between 1-2 μL in the IVT reaction to optimize your assay.
