

PRODUCT INFORMATION

IL-16 (Interleukin-16), Mouse

v. 231101

Catalog number	C02017-5UG / C02017-20UG / C02017-100UG
Package	5 µg / 20 µg / 100 µg
Description	Interleukin 16 (IL-16) is a cytokine that is released by a variety of cells (including lymphocytes and some epithelial cells) that has been characterized as a chemoattractant for certain immune cells expressing the cell surface molecule CD4. The protein encoded by this gene is a pleiotropic cytokine that functions as a chemoattractant, a modulator of T cell activation, and an inhibitor of HIV replication. The signaling process of this cytokine is mediated by CD4. The product of this gene undergoes proteolytic processing, which is found to yield two functional proteins.
Source	<i>Escherichia coli</i>
Sequence	MHDLNSSTDSAASASAASDISVESKEATVCTVTLEKTSAGLGFSLEGGKGS�H GDKPLTINRIFKGDRTGEMVQPGDEILQLAGTAVQGLTRFEAWNVIKALPDGPV TIVIRRTSLQCKQTTASADS with polyhistidine tag at the C-terminus
Endotoxin level	<0.1 EU per 1 µg of the protein by the LAL method.
Purity	>95% as determined by SDS-PAGE.
Form	Lyophilized
Storage Buffer	Lyophilized from a 0.2 µm filtered solution of PBS, pH 7.4.
Reconstitution	It is recommended to reconstitute the lyophilized protein in sterile H ₂ O to a concentration not less than 200 µg/mL and incubate the stock solution for at least 20 min to ensure sufficient re-dissolved.
Stability & Storage	This product is stable after storage at: <ul style="list-style-type: none"> • -20°C for 12 months in lyophilized state from date of receipt. • -20°C or -80°C for 1 month under sterile conditions after reconstitution. Avoid repeated freeze/thaw cycles.

SDS-PAGE analysis of recombinant mouse IL-16
